

Describe → Central tendency → Mean, Median, Mode
 Quantile, Quartile, percentile

→ Variability → Variance, S.D
 → Range

→ Shape → Skewness, Kurtosis, Symmetry

Mean → Average → $1, 2, 3, 4, 5 \Rightarrow \frac{15}{5} = (3)$

Mean → Average → $1, 2, 3, 4, 5 \Rightarrow \frac{15}{5} = 3$

Median → Middle no = $1, 1, 2, 2, 3, 3, 4, 4 = \left(\frac{n+1}{2} \right)^{\text{th}} \text{ element}$
 $\frac{2+3}{2} = 2.5$
 $\frac{9}{2} = 4.5^{\text{th}} \text{ element}$

Mode → Repeating many times

$1, 1, 1, 1, 2, 2, 3, 3, 3, 3$

→ 3 → Unimodal

(3, 1) = Bimodal

> 3 no's → Multimodal

Quantile →
 process of
 Dividing data

Percentile
 Centile

Range →

Variance

$$\sigma^2 = \frac{\sum (x_i - M)^2}{N} \Rightarrow \text{Squared units} \rightarrow \text{Remove}$$

Standard dev

$$\sqrt{\sigma^2} = \sigma \rightarrow \text{standard deviation} = \sqrt{\frac{\sum (x_i - M)^2}{N}} = \sqrt{\sigma^2}$$

Shape

Symmetric

Skewed \rightarrow \times Symmetric

-ve

+

$$\text{Pearson's Co-efficient of Sk} = \left(\frac{\text{Mean} - Md}{SD} \right) 3$$

Kurtosis \rightarrow Peakedness

Leptokurtic

Mesokurtic
